

Steel, Strength and Performance

This DVD by Dr. Saeed Daniali, Chair, Department of Construction Management, University of Washington is a must for structural movers.

Dr. Daniali has appeared before members of IASM at six conferences to describe the importance of knowing the properties and abilities of steel being used in the movement of structures. Members continually request that Dr. Daniali be booked for repeat appearances.

Steel is the most important of four primary tools or equipment required by structural movers; the other three are cribs, jacks and dollies. In order to use steel shapes efficiently, [for cost and performance], it is important to understand the strength and weaknesses of steel. This presentation addresses different types of connections and their performances.

Price: **\$35.00** plus \$6.00 for Handling & Shipping. Postage outside the United States: \$15.00.]
