Long Lake, Minnesota

### Luce Line Trail Bridge

The project was a pedestrian bridge 14' x 352' consisting of two sections of 176' weighing 120 tons. Each section consisted of four pieces bolted together. The sections were transported approximately 1,500 feet

to a spot where a 300 ton and a 250 ton crane could lift each section 30' for placement on abutments and a center pier. One section traversed a railroad bed while the other section was placed over a roadway.
