

The MatJack Advantage

For over 25 years Matjacks have been providing house movers the lift necessary to get the job done quickly and efficiently. A single Matjack airbag can lift 40 tons up to 12" with only 1" clearance. Various size Matjacks are available to move or shift any load necessary.

Strong and Durable!

Matjack's unique construction of butyl rubber over 3 layers of steel or 5 layers of Kevlar provide unequalled strength and durability.

Push Button Operation!

Simply position the bag in place and inflate. Matjack's state-of-the-art deadman's controller allows for easy operation of one or more airbags at the push of a button.

Matjacks for any Application!

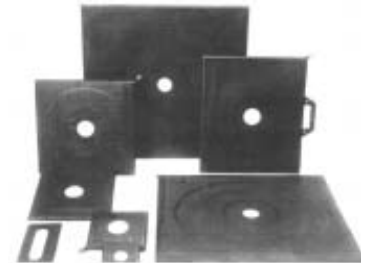

- Pick up slab houses; rebar and all.
- Use them to get under cottages, portable offices, etc., even in the sloppiest conditions.
- Complements unified systems or perimeter hydraulic jacks.
- Shift together or split sections of houses. Matjacks will creep from 6" to 10" in any direction.

"Every mover has special equipment he reaches for in a specific situation, myself included. However, I find Matjacks so versatile they are taken onto every jobsite and I cannot imagine my crew being complete without them. The awkward and dirty weather-related conditions we so often find ourselves in are certainly easier to deal with using Matjacks."
