

Build Safer Homes Improve Compliance With Smart Vent™

The Only ICC-ES Legacy Evaluated
and FEMA Accepted Floodvents.

Smart Facts:

- FEMA Elevation Certificate requires evidence that flood-prone enclosed areas are vented properly. Avoid liability by using **Smart Vent** code compliant vents.
- Flood insurance rates increase dramatically if builders use non-compliant vents or do not vent enclosed areas below the BFE (Base Flood Elevation)
- **Smart Vent** is the only flood vent accepted by the National Flood Insurance Program.
- **Smart Vent** is product approved by the Florida Building Code Commission.
- Don't substitute an air vent for a Certified Flood Vent. An air vent does not offer adequate protection.
